How To – Add a Host

Archive · https://myquickcloud.com/support/knowledgebase/how-to-add-a-host/

This article relates to an older version of MyQuickCloud and is no longer valid. Please go to our How-To section to view the latest articles here - https://myquickcloud.com/kb/how-to/

The Host is the computer with the programs on it that you want to access remotely. The MyQuickCloud administrator (admin user) can add Host computers to your cloud.

Adding a Host Using the MyQuickCloud Desktop App

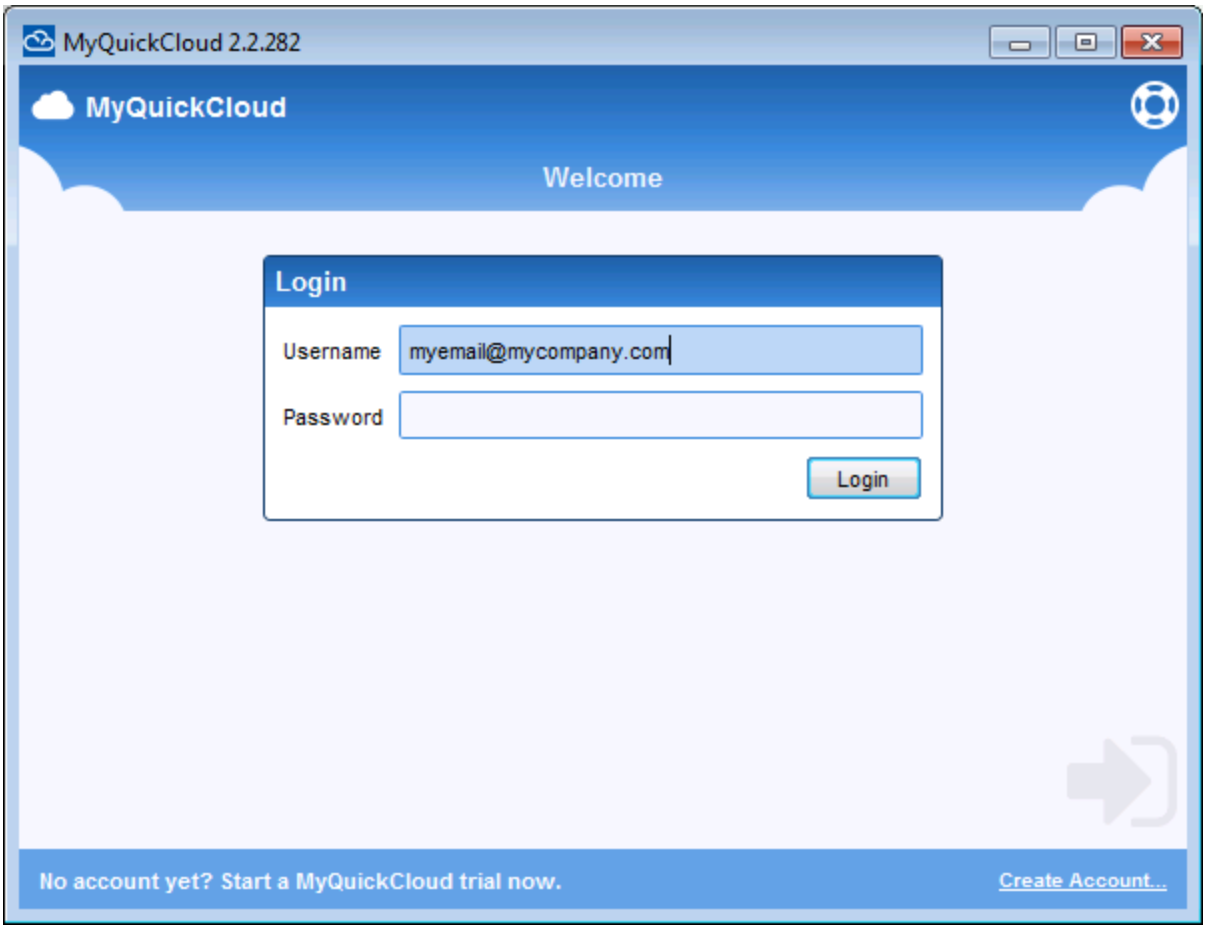

Click here for Web App instructions.

Step 1

Download MyQuickCloud from the MyQuickCloud Downloads page: https://myquickcloud.com/downloads/

Step 2

Run the download to install MyQuickCloud, and after the first use configuration, sign into MyQuickCloud using admin credentials.

Step 3

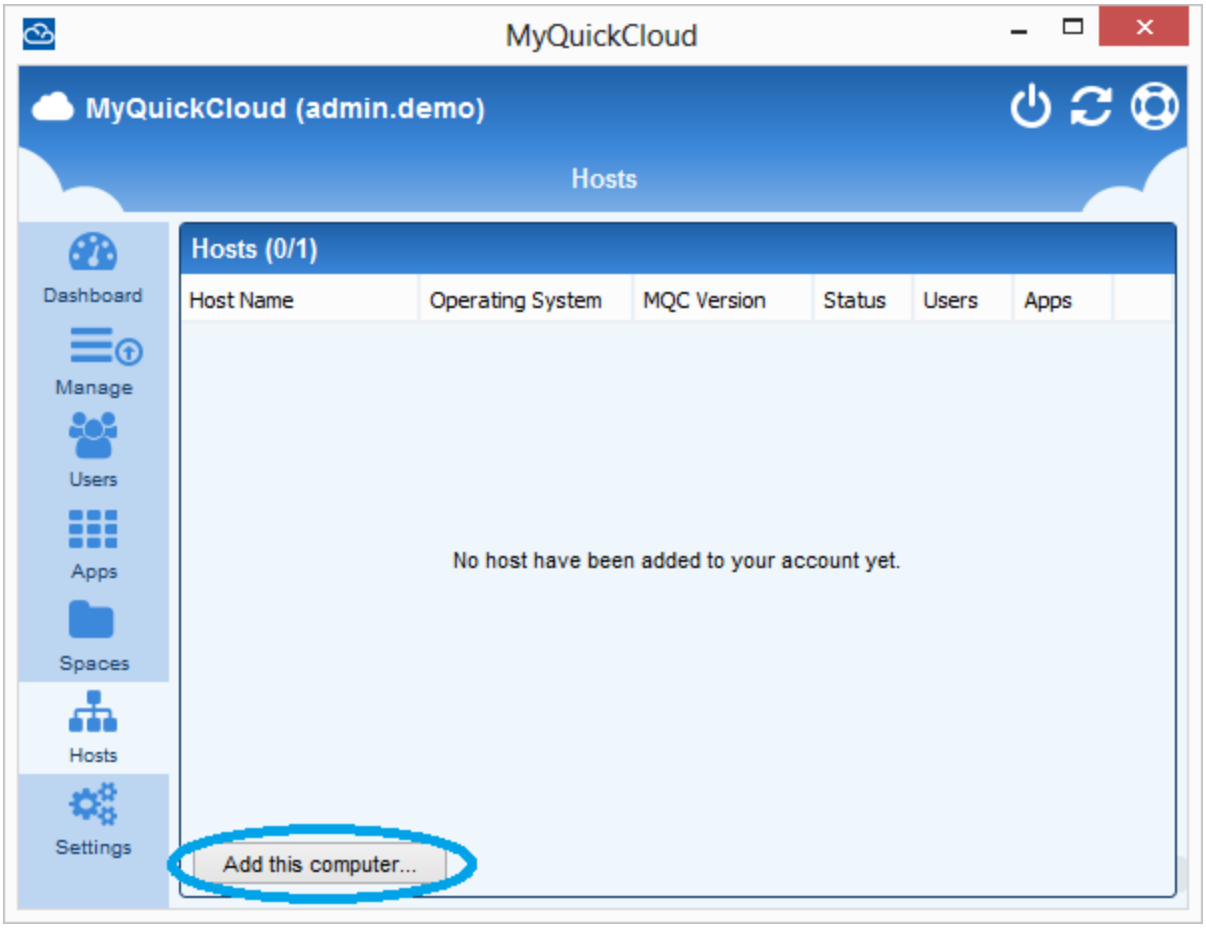

Click on the **Manage** tab on the left to open up the admin options.

Then select the **Hosts** tab option.

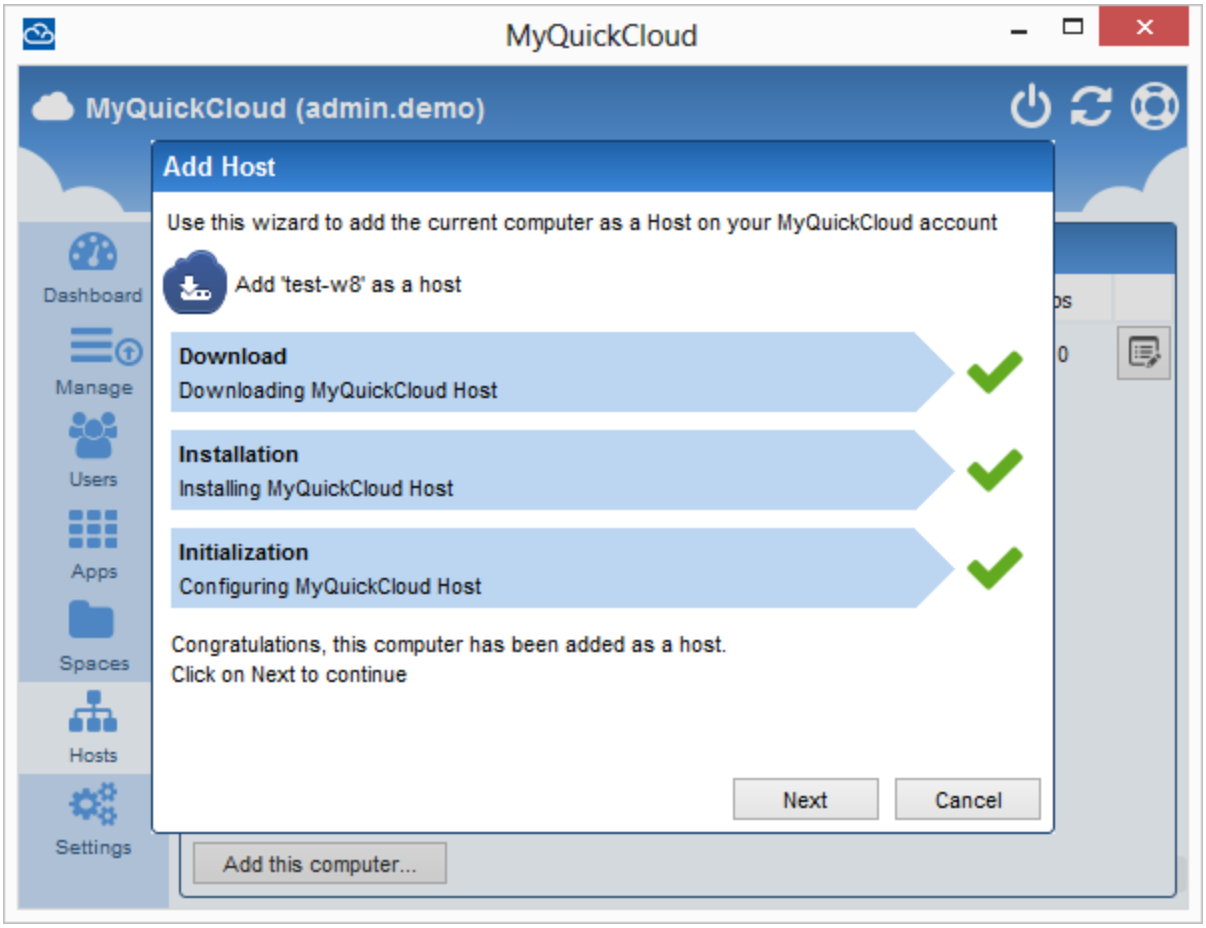

On the host tab, click on **Add this computer** button

Step 4

Click Next in the wizard and the computer will be set up as a host (might take a minute or two).

Please Note: *To setup a host you will need Administrator privileges on the host computer.*

Now that the computer is added as a host, you can start publishing applications from MyQuickCloud.

Please Note: *Configuration of the newly added host can be done from any MyQuickCloud (you don't have to be on the host computer to publish apps).*

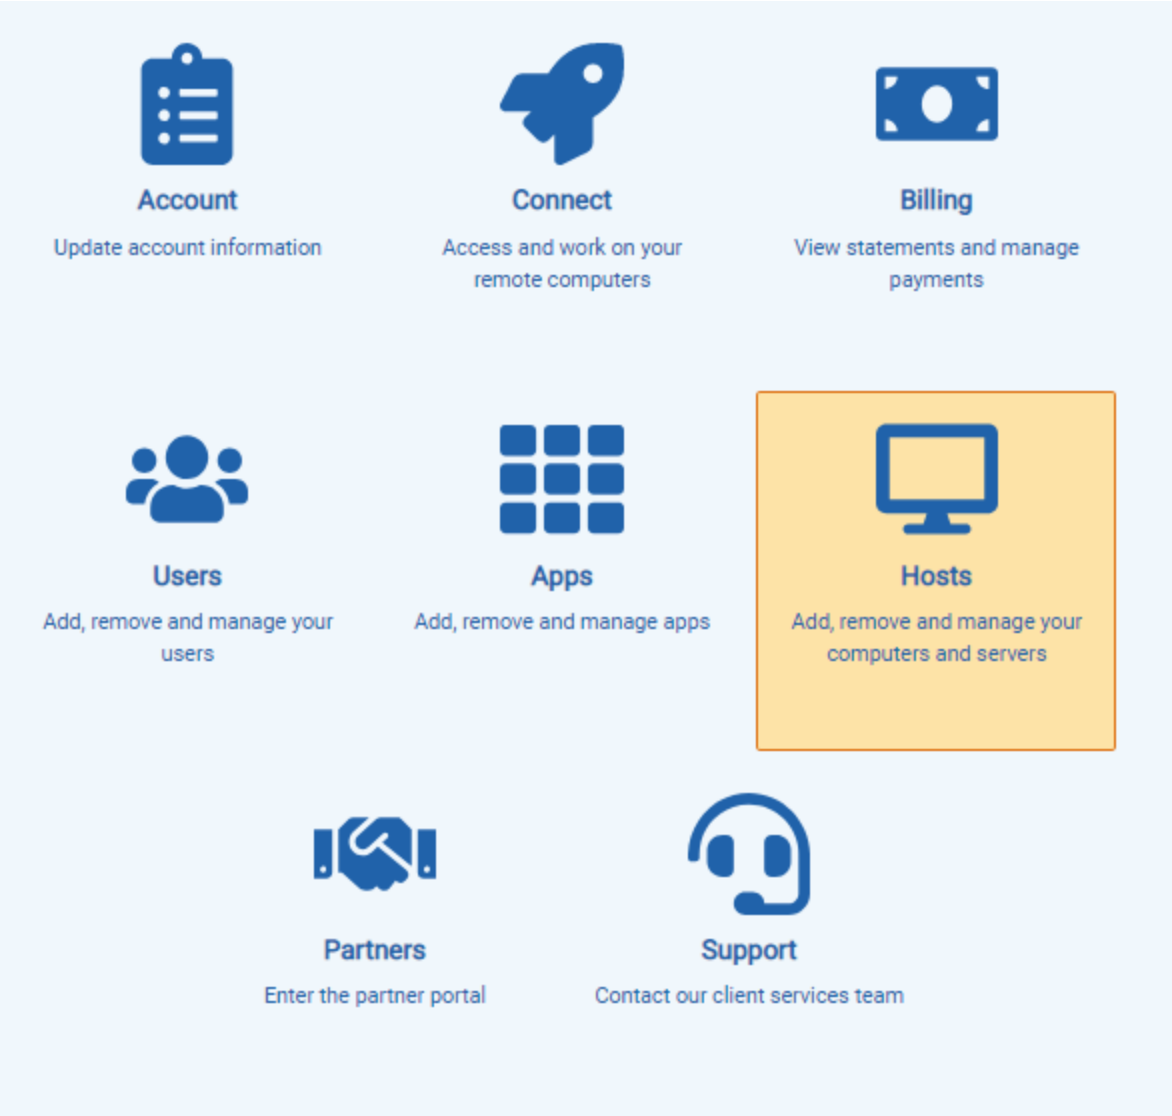

Adding a Host Using the MyQuickCloud Web App

Step 1

Log in to your MyQuickCloud account as an admin user here: https://myquickcloud.com/login/

Step 2

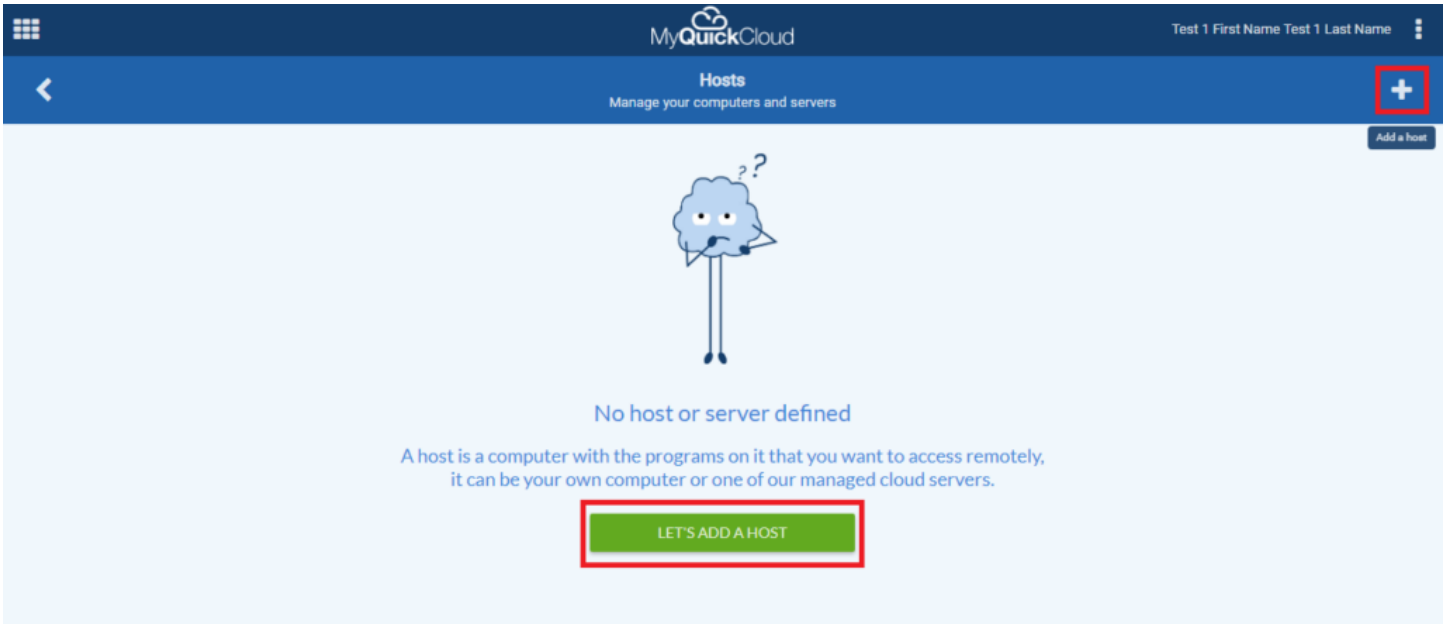

Select the **Hosts** icon from the dashboard.

Step 3

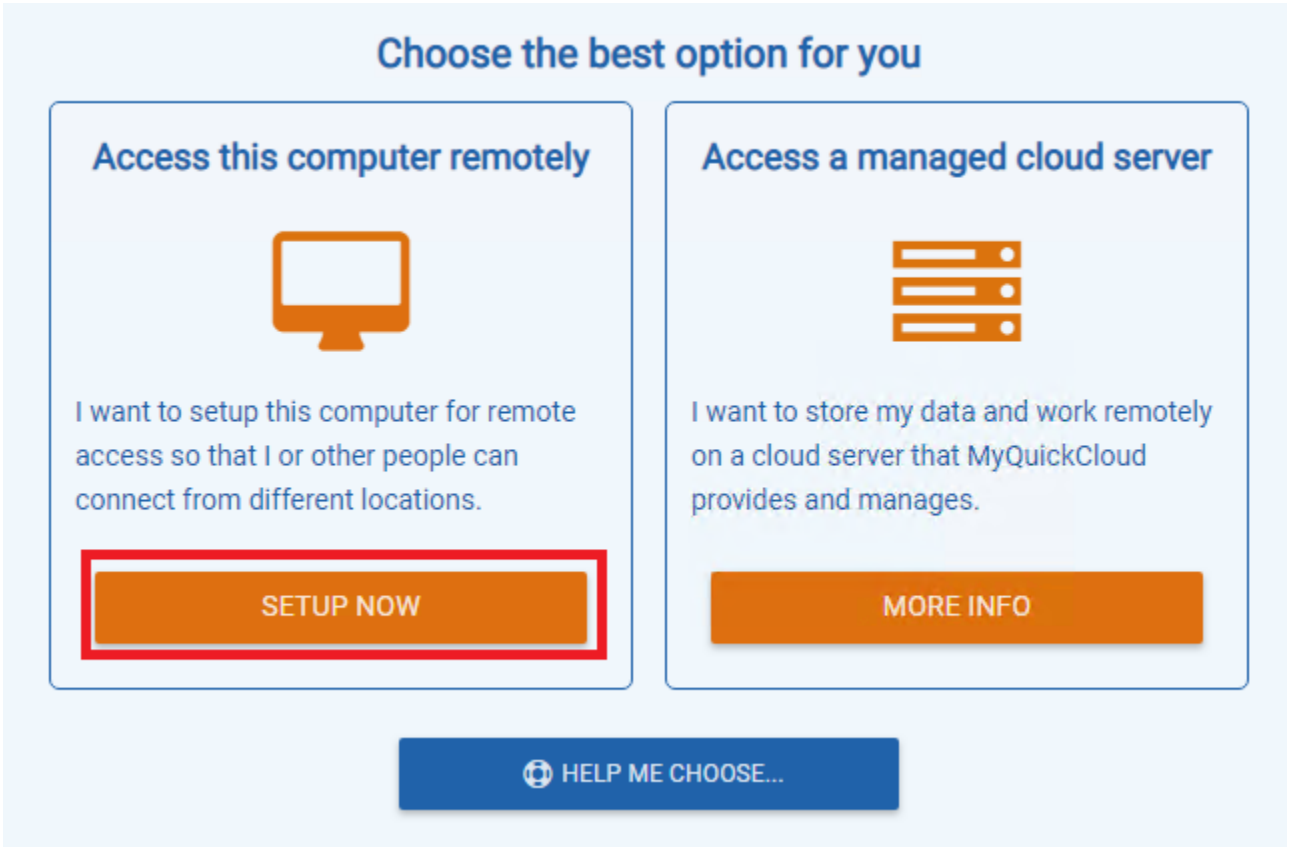

If you don't have any computers setup as a host already you should see this screen below. Click the **Let's Add a Host** button to continue.

If you already have a host computers setup, you should see them listed here. Simply click the **+** icon (**Add a host**) to add the new host.

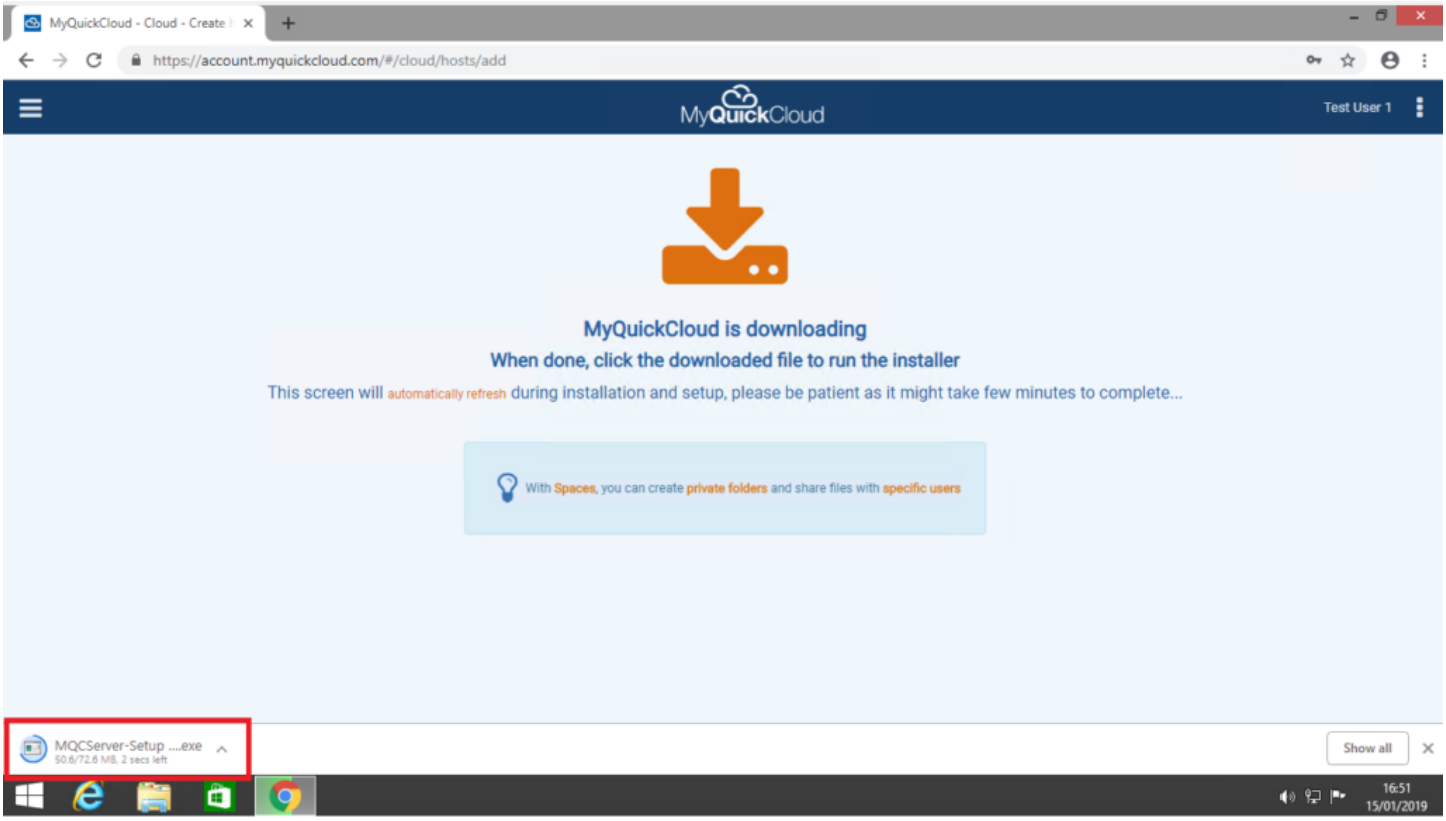

Step 4

Select **Setup Now** under **Access this computer remotely**, to add the computer you're on now as a host. This will start the server download and installation process.

Step 4

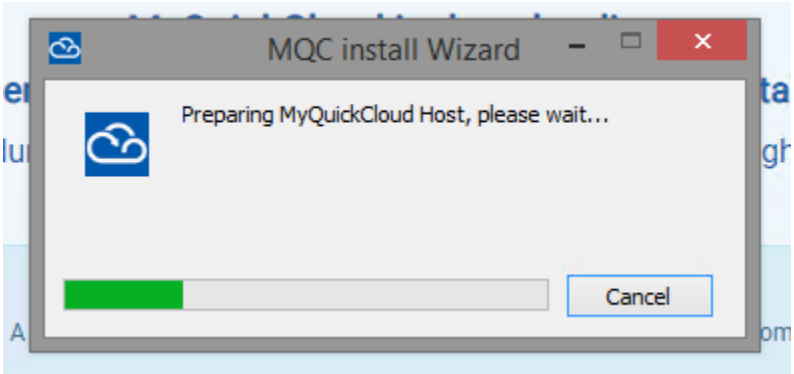

The MyQuickCloud Host installer will begin downloading automatically, when the download is complete, open the installer to continue the setup.

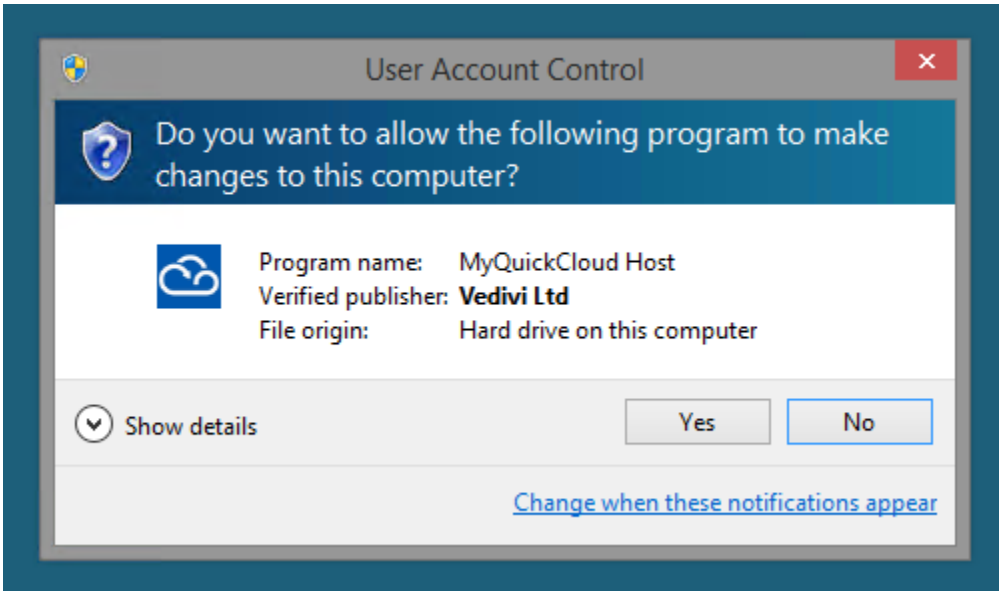

Note: the example above is a screenshot of Google Chrome, your browser may look different. If you're having trouble finding the download, **Ctrl+J** is a common shortcut to show your download history in most browsers.

Step 5

Once you've run the MQC Server setup, it will begin automatically installing the Host software required.

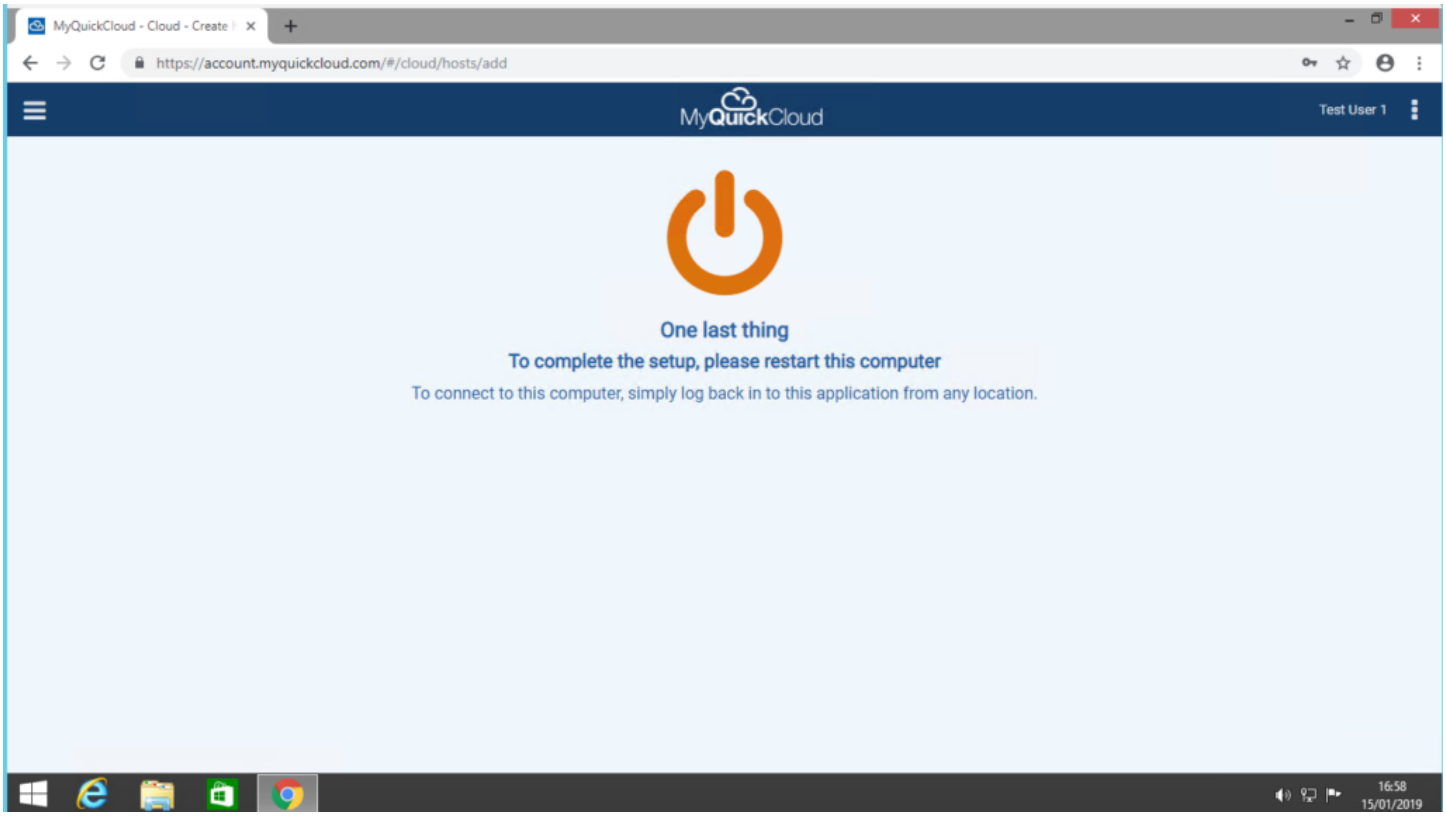

You may be prompted by Windows to allow the installation to continue, click **Yes** to carry on with the setup.

Step 6

When the Installation has completed successfully you should see this screen on your MQC account:

Restart your computer to finish the installation process.

Step 7

After your computer has restarted, log back in to your MyQuickCloud account as an admin user here: https://myquickcloud.com/login/

Now that the computer is added as a host, you can start publishing applications from MyQuickCloud.

Please Note: *Configuration of the newly added host can be done from any MyQuickCloud (you don't have to be on the host computer to publish apps).*

Still Stuck?

You can go through the steps to manually add the host or you can contact us and our techs can remote on and investigate.
