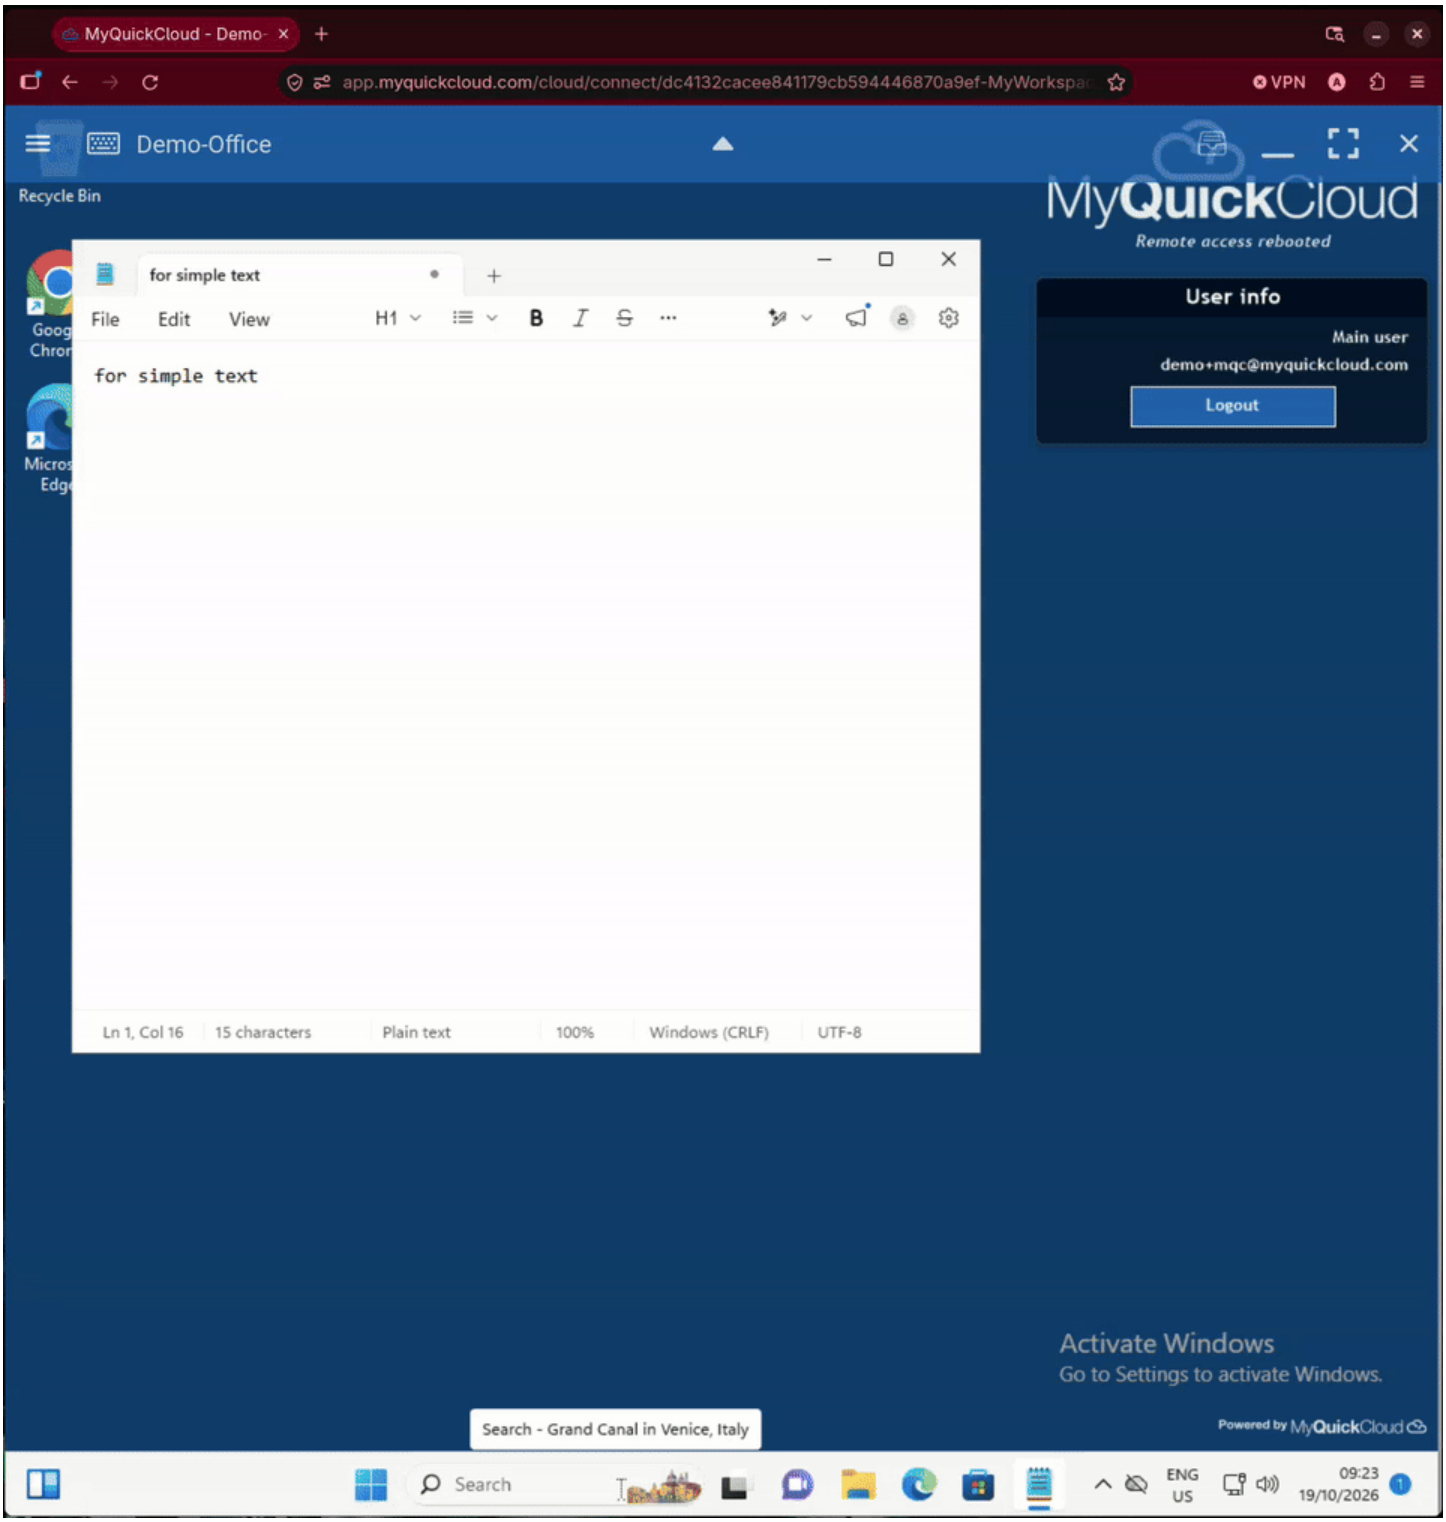
# How To Print With MyQuickCloud

How To · https://myquickcloud.com/support/knowledgebase/how-to-print-remotely/

MyQuickCloud makes printing remotely easy, with the ability to print to both remotely and locally. Remote printers are those connected to the host computer (e.g. the office PC). Local printers are those connected locally to you (e.g. connected at home).

# How To Print With MyQuickCloud

## Overview



## Printing locally

If you are in a MyQuickCloud session and want to print to a local printer connected to your local PC, choose the MyQuickCloud printer+.

1. In your application click Print (*usually File > Print*)
2. In the list of printers, choose **MyQuickCloud printer+**, then click print
3. The print document will open as a PDF is your local web browser, in a new tab
4. Click print on that PDF
5. Choose your local printer, click **Print**

## Print Remotely

You may wish to print something to a printer attached to your host computer. In that case, just choose the printer.

1. In your application click Print (usually File > Print)
2. Choose your remote printer, hit print

## In-depth

The MyQuickCloud printer is designed to make it easy to print to your local printers during your MyQuickCloud session. By creating a PDF of your print job you can be sure that the formatting stays the same and doesn’t get lost in the transfer from your host PC to your local printer.

If you are having any issues with printing, open a chat with our team and they’ll be happy to help.
